CANADIAN FIXED & NOMADIC WIRELESS SERVICES MARKET REPORT, 2013 EDITION

About This Report

The **Canadian Fixed and Nomadic Wireless Market Report, 2013 Edition** is the successor to NBI/Michael Sone Associates' six previous reports on the Wi-Fi/WiMAX market segment and is the most comprehensive and rigorously researched document available on the subject in Canada.

This report provides an insight into this sector's past activities, current status and expected future developments. . It is divided into three main sections. The first comprises an executive summary that gives an overview of the Canadian market and concludes with two figures illustrating past, current and future Wi-Fi hotspot growth trends and service provider market share. This is followed by a tutorial that discusses major issues, developments and technology pertinent to the industry for each of the Wi-Fi and WiMAX sectors and their relationship with cellular wireless, cable, and telco broadband technologies. The third section includes profiles of a dozen significant national and regional service providers. These include the individual telcos, cablecos, as well as a representative sample of the larger independent companies. Each industry segment has been explored so that the report presents services offered and planned, marketing activities, pricing, as well as technology and application trends.

Please note that the fixed wired and mobile Internet markets are examined and discussed in depth in NBI/Michael Sone Associates' **Canadian Internet Service Providers Market Report, 2012 Edition** and upcoming **Canadian Mobile Wireless Communications Services Market Report, 2013 Edition** respectively. Please refer to these publications for information on these market sectors.
